

HV GIS SUPERVISOR

80–100%

Location: Worldwide

MSIS31-D

Nice to have you here. Thank you for your interest.

Hey, I'm [Ben Goepfert](#), and I work in the field of medium-voltage and industrial plants. We have over 25 professionals from Switzerland and around the world working with us. We are experts in the planning, supervision of assembly, site management, and commissioning of electrical infrastructures for industrial facilities. We are particularly proud of our projects at the [mining site in Mongolia](#) and our contribution to the [Biogen production plant in Switzerland](#).

Our activities are not limited to international large-scale projects – we are also firmly rooted in Switzerland. Even though our employees primarily work on-site in engineering and project management for our clients, they are [part of the team](#) at INP Switzerland. This means not only do they benefit from a permanent employment status, but they also have the flexibility to organize their workday themselves. Our spacious office in Turgi also offers the opportunity to directly exchange ideas with our experts. We are a team that focuses on our strengths and supports each other. Therefore, experienced colleagues are on hand to assist with technical questions – all in a simple, direct way. With over 10 years of experience in commissioning and project management, I am also available to clarify questions and share experiences peer-to-peer.

Have questions about the position? I am happy to assist with professional inquiries: +41 56 552 19 07.

P.S. [Here](#) are some insights from INP and our employees.

Exciting tasks for you:

- Provide on-site leadership during the GIS installation (110 kV–550 kV) in sub-transmission and transmission networks
- Take responsibility for on-site installation, maintenance and repair activities
- Ensure on-site quality through inspections and test protocols
- Assess project-specific risks and implement appropriate mitigation measures
- Coordinate, instruct and supervise all workforce activities on site
- Act as the interface between end customers, subcontractors and project management

How you can help us:

- Electrical or mechanical education with at least 3 years of experience in GIS installation and commissioning
- Practical experience with SF₆ gas handling and DILLO systems is an advantage
- Willingness to travel (up to 80% across Europe) and openness to multicultural working environments
- Good physical condition to work at heights
- Flexible and resilient team player & leadership experience
- Confident command of English, German is an advantage
- Valid work permit for Europe is required

What's in it for you?

- **Customised work time models:** Freedom in workday scheduling and work time models tailored to your lifestyle, including part-time work structures
- **Exciting projects worldwide:** Work with top clients across the globe – bringing variety and plenty of energy to your everyday work
- **Ski & chalet magic:** Hit the slopes with your team – our legendary ski weekend awaits, with almost everything included, of course.
- **You can count on a strong network:** In the INP team you can count on a network of like-minded people and advice from other experienced experts.
