

Biogen in Luterbach, Switzerland

Production Facility

Project Description

Biogen was founded in 1978 in Geneva. Today, Biogen is one of the world's leading biotechnology companies. In order to meet the growing global demand for high-quality medicines, Biogen had to expand its production capacity. Therefore, Biogen built a state-of-the-art biopharmaceutical production plant on the Attisholz site in Luterbach near Solothurn. In addition to the large scale production facilities, the Luterbach plant also includes laboratories, offices, supply buildings, and a warehouse.

Role of INP Switzerland

Two INP Schweiz employees were continually present on-location over the 28-month period and took charge of supervising the entire project on behalf of VINCI Facilities Schweiz AG and ETAVIS JAG JAKOB AG, Biel-Bienne, including installation supervision, coordination of commissioning as well as site management in the area of low and medium voltage systems and the entire electrical installation of the electrical systems.

Scope

- Overall coordination of preparatory- and live commissioning
- Creation of a commissioning concept including planning/engineering
- Expert technical leadership
- Coordination of acceptance tests
- Creation of protocols for project management
- Execution of the remaining items list
- Instructing, monitoring, checking and correcting the electrical installation as performed by the company Jacobs
- Checking the electrical correction slips
